Young AI Developer & Creator | Future AI Engineer

⌖ Kalar, Sulaymaniyah, Iraq ▣ Grade 9 Student ↗ Remote / Online Opportunities

Age 14 · Born February 20, 2012 · Building real projects since a young age

ABOUT ME

I am a passionate, self-taught young developer from Kalar, Iraq, focused on AI-powered tools and web development. I have taken an idea from concept to a live website, combining coding, interface design, deployment, and basic search-engine optimization. I enjoy learning by building, solving problems, and turning creative ideas into useful digital products.

I study English every day to strengthen my communication and technical learning. My long-term ambition is to contribute to the future of AI, learn from experienced developers, and use technology to create useful opportunities for people in Iraq, Kurdistan, and beyond.

TECHNICAL SKILLS

Programming & Web

Python — scripting, logic, and automation fundamentals
HTML5 — webpage structure and web development
CSS3 & JavaScript — used in web-interface projects

AI & Digital Tools

ChatGPT · Google Flow · AI voice generation · Prompt engineering · AI APIs (learning) · Natural language processing (basic concepts)

Creator Skills

Video editing · Scriptwriting · Storytelling · Content creation · Social media growth fundamentals

Languages

Kurdish — Native
Arabic — Good
English — Intermediate; actively learning daily

Working Strengths

Problem Solving · Creativity · Self-Learning · Hardworking · Initiative · Entrepreneurial Mindset

EDUCATION

Grade 9 — Basic Education

Kalar, Iraq · 2024–2025 (as provided)

Areas of interest: STEM, computer science, and mathematics.

Independent Learning

Daily English study, online Python courses, AI tutorials, and hands-on practice through personal projects.

FEATURED PROJECT

AI YouTube Title Generator

LIVE WEB APPLICATION · 2026

Overview: Built and published a web tool designed to help YouTube creators brainstorm engaging, search-friendly video titles using AI concepts and prompt engineering.

Live Website

kalarykalary20122012-web.github.io/ai-youtube-title-generator-/

My Contributions

- Developed the website structure and interface using HTML, CSS, and JavaScript, with Python logic as part of the project workflow.
- Designed the user interface and user experience to make the tool clear and approachable for creators.
- Applied AI prompt-engineering ideas to support generation of engaging, SEO-conscious title suggestions.
- Published the project with GitHub Pages so it could be accessed online.
- Worked with Google Search Console to verify site ownership, submitted a sitemap, and addressed basic SEO setup.
- Took the project from an idea to a public, shareable website and learned through the process of building and deployment.

Technology & Methods

Python · HTML5 · CSS3 · JavaScript · AI Prompt Engineering · GitHub Pages · Google Search Console · SEO Fundamentals

Project Outcome

Created a live tool intended for real-world creator use. This project demonstrates initiative, practical web-development experience, persistence, and an ability to work across several stages of a small digital product.

AI Content Repurposer

LIVE WEB APPLICATION · 2026

Overview: Engineered and deployed a responsive web utility designed to transform raw video ideas and topics into tailored content for multiple platforms, including Twitter/X threads, TikTok scripts, and LinkedIn thought-leadership posts, with English and Kurdish language support.

Live Website

kalarykalary20122012-web.github.io/ai-content-repurposer/

Key Contributions

- Designed a modern dark-mode interface using Tailwind CSS, HTML5, and JavaScript.
- Built content-generation workflows for multiple platforms, with distinct Viral, Professional, and Educational tones.
- Added clipboard integration to make generated content easy to copy and reuse.
- Published the application through GitHub Pages and made it accessible online.

Technology & Methods

HTML5 · Tailwind CSS · JavaScript · GitHub Pages · Responsive UI/UX Design · Multilingual Content Workflows

Project Outcome

Created a second public-facing web application demonstrating practical interface design, multi-platform content workflows, multilingual thinking, and independent deployment.

GOAL & VISION

My goal is to grow into an AI engineer and contribute to advanced AI research and products at leading organizations such as OpenAI or Google DeepMind. I want to build useful, capable AI systems, strengthen the technology community in Iraq and Kurdistan, and eventually create my own AI company.

Current focus: strengthening programming fundamentals, improving English, and building projects that turn learning into practical experience.

Available for suitable remote learning opportunities, mentorship, and online project collaboration. For formal internships, eligibility may depend on the organization's age requirements.

EXPERIENCE & INITIATIVE

Social Media Content Creator & AI Video Producer
2024–Present

Self-initiated creative projects · TikTok, YouTube & Instagram

- Created 100+ educational history videos using AI voice-over workflows.
- Developed comedy-video concepts with Google Flow, including scriptwriting, editing, and publishing.
- Practised storytelling, short-form video production, content planning, and adapting ideas for social platforms.
- Built practical awareness of audience interests, content trends, and the importance of consistent improvement.

Young Entrepreneur — Small-Business Management
2023–Present

Independent small-business activity · Kalar, Iraq

- Gained hands-on experience supporting sales across samoon (bakery products), nuts, cosmetics, and women's accessories.
- Developed practical understanding of customer service, product presentation, marketing, sales, and money management.
- Learned responsibility, reliability, and the value of hard work through real-world business activity from a young age.

CORE STRENGTHS Problem Solving • Creativity • Self-Learning • Teamwork • Hardworking
